

Advanced Simulation Features

Graph Based Analysis of Mixed Mode SPICE Circuit Simulation

Graph Based Analyses

The Graph Based Simulation includes the following graph types for analysis:

- Analog Transient Analysis
- Digital Transient Analysis
- Mixed Mode Transient Analysis
- Interactive Analysis
- Distortion Analysis
- DC Parameter Sweep Analysis
- Frequency Analysis
- Fourier Analysis
- Noise Analysis
- Transfer Curve Analysis
- AC Transfer Sweep Analysis
- Conformance Analysis

 *Advanced Simulation Features in an add-on module and must be purchased along with either a Proteus VSM or a Proteus PCB product.*

With continual development on the Proteus Design Suite we endeavour to keep all content updated with the latest product details. On rare occasions this may not happen immediately, and website content will then be incomplete or inaccurate. We will attempt to correct any such errors as soon as possible, E&OE.
